PROFESSIONAL SUMMARY

Statistics graduate and Junior AI Software Engineer who builds full-stack web applications, AI agents and smart contracts with TypeScript, React/Next.js, Python, Solidity and Rust. Has shipped multiple live hackathon products across AI and Web3, contributed to open-source Stellar and Starknet projects, and taught web development to beginners. Comfortable breaking down requirements, investigating errors and explaining technical decisions clearly.

CORE SKILLS

Languages	TypeScript, JavaScript, Python, Solidity, Rust, HTML5, CSS
Frontend	React, Next.js, Vite, Tailwind CSS, TanStack Query, accessibility
Backend & AI	Node.js, REST APIs, API integration, Vercel AI SDK, OpenAI & Claude APIs, MCP / WebMCP, AI agents
Web3	Stellar / Soroban, Zama fhEVM, EVM chains, wagmi / viem, Hardhat, x402 payments
Tools & testing	Git, GitHub, Vitest / Jest, unit & integration testing, Postman, Firebase, Vercel, Figma, Turborepo
Strengths	Analytical & quantitative reasoning, structured problem-solving, technical writing, teaching

EXPERIENCE

Junior AI Software Engineer Intern · TalentNation — June 2026 – Present

- Complete assigned engineering tasks and programming exercises, iterating on solutions with feedback.
- Build Python and software engineering depth through structured learning and implementation work.
- Break down requirements, investigate errors, and explain technical decisions clearly to the team.

Open-Source Contributor · Stellar Ecosystem (Drips) — January 2026 – June 2026

- Contributed features, fixes and tests to open-source Stellar projects through the Drips platform, spanning Soroban (Rust) smart contracts and TypeScript frontends.

Open-Source Contributor · Starknet Ecosystem / OnlyDust — February 2024 – February 2025

- Co-built BeamX in a three-person hackathon team: an AI agent that lets users create tokens from plain-language prompts.
- Worked in JavaScript and TypeScript on smart-contract development and testing, and wrote the technical documentation.

Technical Instructor (NYSC) · Colab Innovation Hub, Kaduna — August 2023 – August 2024

- Delivered hands-on beginner training in HTML, CSS, JavaScript and version control, guiding learners through exercises and troubleshooting.
- Contributed to a Web3 community project: smart contracts and a prototype dApp in Solidity and Cairo.

Statistics Tutor · NFCS, University of Ibadan — 2022 – 2023

- Helped students work through introductory statistics problems step by step, adapting explanations to each learner.

SELECTED PROJECTS

Hindsight · AI post-trade coach that finds a trader's costly habits and proves each with their own trades; blind-tested at 99.7% precision on 200 held-out traders. Next.js, TypeScript, Vercel AI SDK, Vitest · hindsight-puce.vercel.app

Formwork · Accessible visa application that a user and their browser AI agent fill in together via WebMCP; the agent can fill and flag fields but never submit. React, TypeScript, Vite, WebMCP · formwork-omega.vercel.app

Confidium · Production-grade dApp to browse, wrap, decrypt and unwrap confidential (ERC-7984) tokens, with a reusable registry SDK. Next.js 15, React 19, wagmi, viem, Turborepo, Zama FHE · confidium.vercel.app

CipherBook · Fully encrypted limit-order-book DEX where prices are matched on-chain without being revealed; 27 passing contract tests. Solidity, Zama fhEVM, React · cipherbook-red.vercel.app

Vanton · Agent-payment marketplace on Canton where AI agents pay per API call with ledger-enforced spending limits. TypeScript, Canton, x402 · vanton.vercel.app

EDUCATION & TRAINING

B.Sc. Statistics · University of Ibadan, Nigeria — December 2019 – June 2023

ALX Software Engineering (Front-End) · ALX Africa, Remote — January 2025 – August 2025
